Group — userID, ID, name, postID

contains

Category — storyID/secretID, name
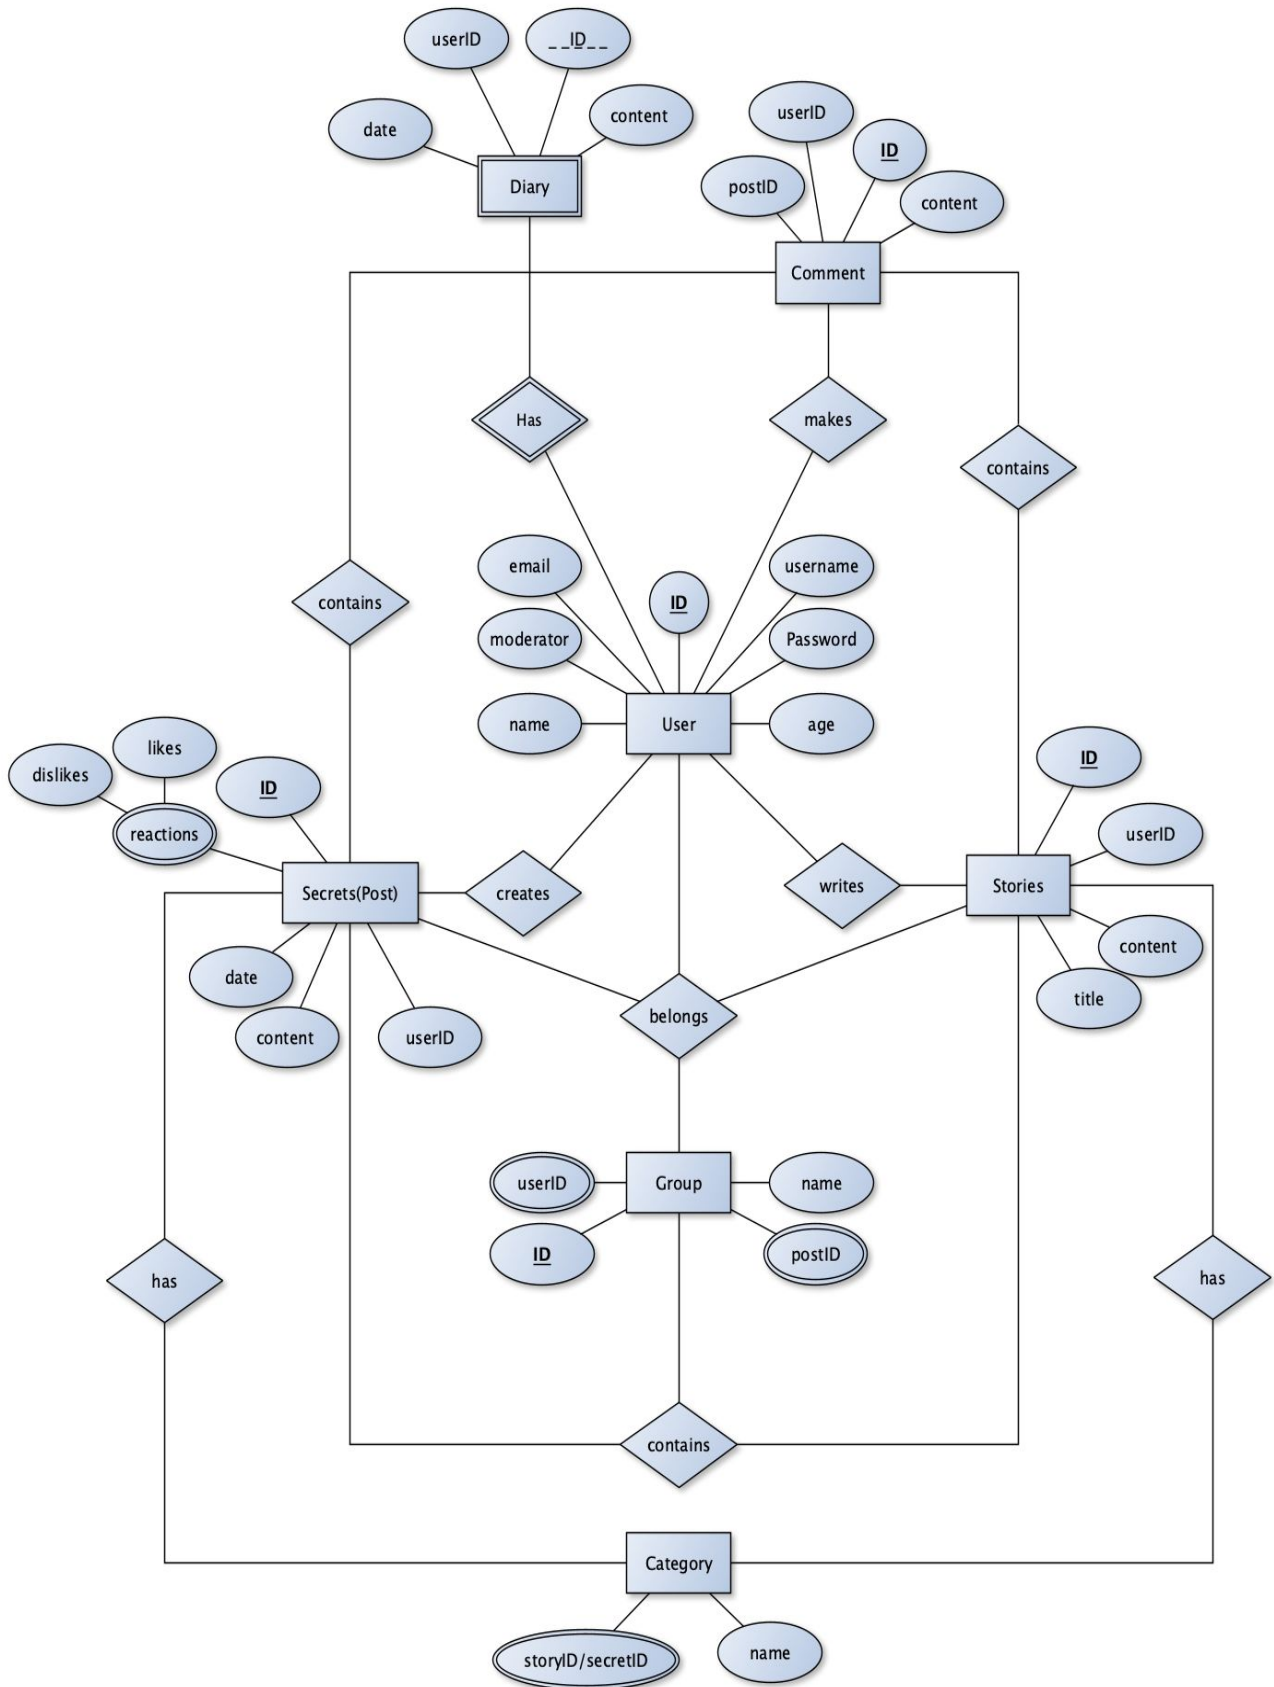

System Definition

The system being developed is based on an idea of a Anonymously Secret or Story sharing system.
The users can choose to post their secret anonymously without being tracked or related to or the users can share their life stories where the users' identity is provided. Both stories and secrets have a Category, where a user can choose a certain category and view all the related verified secrets and stories. The user has also the chance to write a personal diary or to comment non anonymously on the secrets or stories.

There are going to be two types of users. A moderator and a simple user.
A simple user is allowed to create secret posts, stories , groups, comments and diary pages. But the stories and secrets of any user are not posted until they are verified by a moderator. A user can belong to Groups where the internal secrets and stories are private to only and only group members.
